## Declaration on Bisphenol Content

RAMEX S.r.l. hereby declares that, based on supplier declarations and available material specifications, the hose reels and related products manufactured by the company do not intentionally contain Bisphenol A (BPA) or other bisphenols subject to restriction.

Specifically:

- The powder coatings used for the painting of RAMEX hose reels (e.g. Grey RAL 7004 Matt and Blue RAL 5011 Matt) do not contain bisphenol or bisphenol-derived substances according to the declarations received from our coating powder suppliers.
- Stainless steel hose reels manufactured from AISI 304 and AISI 316 stainless steel do not contain bisphenol or bisphenol-derived substances, as no polymeric or coated components are present in contact with the fluid.
- Elastomer components (such as EPDM, NBR, FKM or similar sealing materials) are supplied by qualified manufacturers who confirm that Bisphenol A (BPA) and other bisphenols are not intentionally added during the production of the rubber compounds.
- Plastic components (such as PBT, PA/nylon, ABS or POM parts) are manufactured using engineering polymers whose raw materials do not intentionally contain Bisphenol A according to the declarations provided by our suppliers.

This statement is issued based on supplier information, material specifications and RAMEX technical knowledge.

For products specifically manufactured for direct food contact applications (MOCA), material compliance with applicable EU food contact legislation, including Regulation (EC) No 1935/2004 and Regulation (EU) 2024/3190, is assessed and documented at the order stage.

This declaration is issued in good faith to the best of our knowledge and will be updated if new regulatory requirements or supplier information become available.

Stefano Valdesalici
